Professional Summary

DevOps Engineer with 3+ years of experience building CI/CD pipelines shipping daily to 4 platforms, managing multi-cloud infrastructure (AWS, GCP, DigitalOcean), and deploying containerized applications with Docker and Kubernetes. Built production monitoring with Prometheus/Grafana, managed Kafka event streaming, and automated infrastructure with Terraform and Pulumi across 3 cloud providers serving 10+ engineers. Built a \$0/month production infrastructure from scratch using K3s, ArgoCD, and Cloudflare Tunnel.

Technical Skills

CI/CD & Automation: GitHub Actions, Jenkins, Fastlane, Shorebird

Cloud Platforms: AWS (EC2, S3, IAM, VPC, Lambda), GCP (BigQuery, Compute Engine), DigitalOcean, Oracle Cloud, Cloudflare

Containers & Orchestration: Docker, Kubernetes, K3s, ArgoCD, GitOps

Infrastructure as Code: Terraform, Pulumi, Ansible

Monitoring & Observability: Prometheus, Grafana, VictoriaMetrics, CloudWatch, Uptime Kuma

Networking & Security: Nginx, DNS, SSL/TLS (Let's Encrypt), Firewalls (iptables/UFW), IAM/RBAC, Cloudflare Tunnel

Data & Messaging: Apache Kafka, PostgreSQL (replication), Redis, BigQuery

Programming & Tools: Python, Bash, Linux (Ubuntu/RHEL), Git, JIRA, Scrum/Kanban

AI-Assisted Engineering: Claude Code, Prompt Engineering, Agentic Coding Workflows

Professional Experience

DevOps Engineer

Appsndevices Technologies Pvt. Ltd.

*Nov 2022 – Present
Bengaluru, India*

- Built multi-platform CI/CD pipelines with GitHub Actions shipping daily releases to **4 platforms** (Android, iOS, Windows, macOS) from a single codebase, reducing build time from **2 hours to 15 minutes** per platform
- Managed deployment automation serving **10+ engineers**, improving release consistency and eliminating manual deployment errors across all platforms
- Administered multi-cloud infrastructure across **AWS, GCP, and DigitalOcean** (EC2, S3, IAM, VPC, BigQuery, Compute Engine, Droplets) with cost optimization through right-sizing and unused resource cleanup
- Provisioned reproducible infrastructure using **Pulumi and Terraform**, with Ansible for config management — managing version-controlled environments across **3 cloud providers**
- Deployed and maintained **Docker** containers and **Kubernetes** clusters ensuring **99.9%+** application availability; managed secrets with GitHub Secrets, Infisical, and Google Secret Manager
- Implemented **Prometheus + Grafana** monitoring with custom dashboards and alerting, reducing mean-time-to-detection for production incidents; managed **Apache Kafka** clusters for distributed event streaming
- Configured Nginx reverse proxies, Cloudflare DNS, SSL/TLS automation (Let's Encrypt), firewall rules (iptables/UFW), and **IAM/RBAC** policies enforcing least-privilege access
- Built disaster recovery automation (database backups, restore testing, runbooks) and supported production through on-call rotations with root cause analysis
- Leveraged **Claude Code** for AI-assisted scripting, debugging, config generation, and operational analysis — accelerating engineering velocity

Projects

\$0/Month Production Infrastructure

karthikhegde.in

- Designed and deployed production-grade infrastructure on free-tier services: Hugo on Cloudflare Pages, **K3s** on Oracle Cloud ARM, **ArgoCD** GitOps, Prometheus + VictoriaMetrics monitoring, Grafana dashboards, Uptime Kuma status page, and **Cloudflare Tunnel** for zero-trust networking — **total cost: \$0/month**
- Stack:** Terraform, K3s, ArgoCD, Docker, Cloudflare Tunnel, Prometheus, VictoriaMetrics, Grafana, Uptime Kuma, Hugo, GitHub Actions

Education

Master of Computer Applications (MCA)

B.M.S College of Engineering

*2020 – 2022
Bengaluru, India*

Certifications

Docker Certified Associate (DCA) — *In Progress*
