Summary

DevOps Engineer with 3+ years spanning database engineering and DevOps/SRE. Cut multi-platform release build time from **2 hours to 15 minutes**; run Docker/Kubernetes workloads at **99.9%+ availability** across AWS, GCP, and DigitalOcean with Terraform IaC, GitOps (ArgoCD), and Prometheus/Grafana observability. Built a \$0/month production platform from scratch using agentic AI workflows (Claude Code). Open to relocation and visa sponsorship; remote-friendly.

Experience

DevOps Engineer, Colligence Research Private Limited, Bengaluru, India Nov 2023 – Present
(Internal transfer from sister company Appsndevices Technologies)

Project: Circle (Multi-Platform Product Delivery)

- Built multi-platform CI/CD pipelines with **GitHub Actions** shipping daily releases to Android, iOS, Windows, and macOS from one codebase, cutting build time from **2 hours to 15 minutes** per platform.
- Automated code signing, artifact validation, and release promotion for **10+ engineers**, eliminating manual release errors.
- Implemented **Prometheus/Grafana** alerting and SLO tracking, reducing mean time to detect (MTTD); ran production on-call with root cause analysis (RCA).
- Developed custom **Claude Code** agent skills (CI-failure triage, deploy/rollback, log analysis, secrets audit) that reduced release and incident-response toil.

Project: Aikyat Platform

- Provisioned cloud infrastructure across 3 providers (**AWS, GCP, DigitalOcean**) as version-controlled Infrastructure as Code (IaC) with **Terraform, Pulumi, and Ansible**.
- Operated **Docker/Kubernetes** workloads at 99.9%+ availability; managed secrets with Infisical and Google Secret Manager, enforcing IAM/RBAC least privilege.

Database Engineer, Appsndevices Technologies Private Limited, Bengaluru, India Nov 2022 – Nov 2023

- Administered production **PostgreSQL**: streaming replication, automated backups with restore testing, and performance tuning for high availability.
- Engineered **Apache Kafka** event-streaming and log-aggregation pipelines feeding **BigQuery** analytics.
- Designed schemas and optimized complex SQL queries for application and reporting workloads.

Projects

\$0/Month Production Platform (karthikhegde.in) — production infrastructure on free tiers: **K3s** on Oracle Cloud ARM, **ArgoCD** GitOps, Terraform, Prometheus + VictoriaMetrics + Grafana, Uptime Kuma, Cloudflare Tunnel (Zero Trust). Created end-to-end by directing **agentic coding** sessions in Claude Code; AI-generated Terraform, manifests, and CI pipelines, personally reviewed, tested, and operated.

Technical Skills

Cloud Platforms: AWS (EC2, S3, IAM, VPC, Lambda), GCP (Compute Engine, BigQuery), DigitalOcean, Oracle Cloud, Cloudflare; cost optimization (FinOps)

Containers & Orchestration: Docker, Kubernetes (K8s), K3s, ArgoCD, GitOps

IaC & CI/CD: Terraform, Pulumi, Ansible, GitHub Actions, Jenkins, Fastlane, Shorebird

AI & Agentic Engineering: Claude Code (custom agents & skills), AI-assisted development, agentic workflows with human review gates

Monitoring & Observability: Prometheus, Grafana, VictoriaMetrics, CloudWatch, SLOs, alerting, on-call, incident management

Databases & Messaging: PostgreSQL, Apache Kafka, Redis, BigQuery, event streaming

Scripting & Automation: Python, Bash, PowerShell, shell scripting, Linux (Ubuntu, RHEL), Git

Networking & Security: NGINX, DNS, SSL/TLS (Let's Encrypt), Cloudflare Tunnel (Zero Trust), Infisical, IAM/RBAC

Education

Master of Computer Applications (MCA), B.M.S College of Engineering, Bengaluru 2020 – 2022

Certifications

Docker Certified Associate (DCA), in progress · Certified Kubernetes Administrator (CKA), planned 2026
